

Innovation is when the market  
shouts „Hurray!“

**VENTAFLEX®**

More efficiency in air conduction

#### Our vision:

#### Underground air conduction should be perfected

Especially for underground installed air ducts there are only a handful of little convincing solutions on the market – often ducts are used, which originally have been designed for other applications. Compromises regarding handling, hygiene, insulation and eventually costs are always included in the budget.

VENTAFLEX® air ducts have often been a popular applied alternative for many years – and we have decided to make this good product even better..

#### Our mission:

#### Development of an air duct which is ideal for underground installation

Numerous discussions with customers and experts of different technologies were the start of unprecedented development work in this field many years ago.

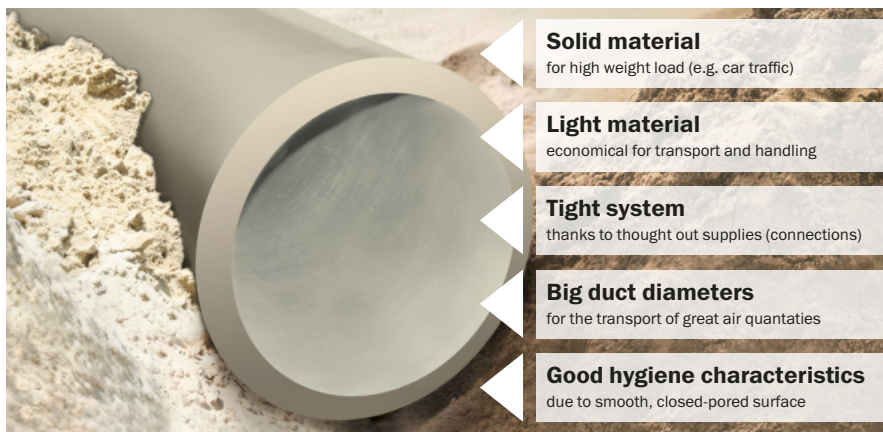

On the basis of the collected information we were able to precisely formulate from different perspectives which claims are made for a perfect air duct for underground installation:

#### Please contact us!

We will be happy to advise you personally how LAVANTUS® air ducts can be used in your project.

Call us: 0 25 05 – 93 829 0

#### Our solution:

#### LAVANTUS® – the air duct especially for underground installation

The product revolutionizing underground air conduction is now available! Thanks to the patented Rotafusion Method, developed in Germany, VENTAFLEX® has created an air duct, which unites characteristics such as stability, low weight, tightness and hygiene. The availability of big duct cross sections, custom-made supplies, reliable support and attractive pricing stand for a significant advantage when realizing great construction projects.
