

SPECIAL COMPONENTS

Completely manufactured
at VENTAFLEX®!

VENTAFLEX®

More efficiency in air conduction

Systems with VENTAFLEX® air ducts are known to work perfectly in any application. Whether installed in new or existing buildings, VENTAFLEX® air ducts can be perfectly adapted to the technical and architectural conditions - thanks to individually manufactured special components.

NEW: The final building block for complete on-site production

VENTAFLEX® has developed a new surface finishing process especially for special components. This means that every custom-made product has the high resistance to chemicals, abrasion and weathering that characterizes all VENTAFLEX® air ducts. Our workpieces leave production with a smooth and even surface – good looks are also important to us!

Everything from one source

Complete production at the VENTAFLEX® site allows unbeatable time and quality management. The workpieces are completely manufactured by us without any detours and delivered to their place of use. Your VENTAFLEX® contact person always has a direct influence on production and can therefore respond quickly to your needs: That is our service promise.

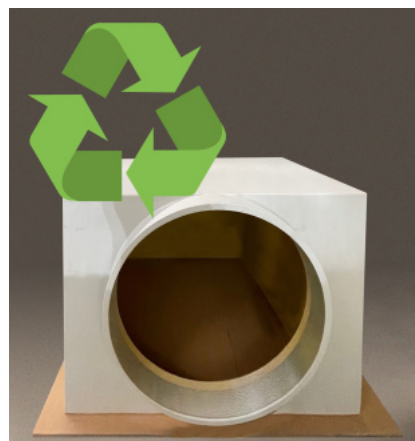

Always ready for you: the direct "wire"!

We would be happy to advise you personally if you would like to use special solutions for your project with VENTAFLEX®.

The highlight of the new process: it makes it recyclable

Material purity was a goal on the way to even more sustainability. With the new finishing process, we have found a way to make the production of VENTAFLEX® air ducts more resource-efficient: sorted PUR residues are processed in order to be used as a starting material for the production of new components at VENTAFLEX®.
