

Sports halls: GOOD CONDITIONS FOR TOP PERFORMANCE

Installing modern technology in sports halls does not only increase the performance and well-being of athletes of every age. It also ensures that sport stays healthy, even if work out is done intensively. Quality features for ideal conditions, next to joint-gentle flooring and acoustic walls, is especially the supply of oxygen-rich, well-tempered fresh air.

VENTAFLEX® air ducts: just take a deep breath!

A controllable environment for indoor athletes can only be accomplished by a reliable ventilation system. The main task here is the even air distribution in a great room – without any noticeable air movement.

VENTAFLEX® air ducts are the perfect “teampayer” for these tasks; the system can not only be adapted to any architectural conditions, but also scores especially with its hygienic features and efficiency.

Window ventilation is outdated, renovation is better!

Tilted windows, roof hatches ... up to kept-open doors: unconventional paths are often taken in old gyms, in order to eliminate “bad atmosphere”. These solutions have many disadvantages – eventually they can even present a security problem. A subsequent installation of a modern ventilation system could be a great benefit for outdated sports facilities.
